

## Packaging Requirements for all LSR Shipments

All shipments to LSR, LLC must be packaged accordingly. Improper packaging could result in delays in processing and/or rejections:

- Each box must have a LSR shipping label filled out and attached to the box. This can be found on our website at [www.Legendsmeltingrecycling.com](http://www.Legendsmeltingrecycling.com)
- Each box must be saran wrapped along the top of the box to secure product. Black saran wrap is preferred but not required. We suggest spray painting a random design on all boxes and photographing each box. We also suggest taking a picture of your material loaded onto the shipping vehicle.
- All boxes must be properly fit on a 48x40 pallet and not have excess pipe or material hanging to the outside of the box that would impede loading/unloading. Any individual converter unit that is too large for a box must be properly banded to a 48x40 pallet but must fit within the size of the pallet to not impede loading/unloading.
- If you are shipping material to be checked-in/graded for purchase at time of arrival you must still put a LSR shipping label on each box. In the "Contract Number" section note: "For purchase by part number at time of arrival." All other information must still be filled out in order to be received by LSR.
- See image below for example - however please use the LSR shipping label on each box not the label in the picture:
